

HAY BAR 1

EXTEND YOUR PUMPING SEASON.

Top dress with liquid manure to accelerate the growth of hay crops, or apply now and incorporate later. The Top Kick Hay Bar provides a quick and consistent liquid manure application to standing or cover crops.

- Widths from 30' - 50'
- Coverage widths from 35' - 55'
- Splash pan quantities from 6 to 12
- GPA Rates from 5,000 - 20,000+
- Manual folding wings

FEATURES

SPLASH PANS

Splash pans give liquid manure a uniform “fan” effect as it is distributed across and out of the toolbar onto the field, while achieving a 3,000 – 20,000+ gallons per acre application rate.

LIGHTWEIGHT, SIMPLE DESIGN

This toolbar requires less tractor horsepower to pull and ultimately consumes less fuel. The Top Kick Hay Bar provides a quick and easy application, especially for farmers who are managing their own liquid manure.

NARROW TRAVEL WIDTH

When you are finished with the job at hand and are ready to get on to the next, fold this toolbar to a slender travel width of approximately 1/6th of its unfolded width. For those of you who are not mathematical wizards, that’s approximately 7.5’.

HAY BAR 1
